# INFOMINA BROADENS ENTERPRISE SOFTWARE BUSINESS BEYOND MAINFRAME TECHNOLOGIES

*New Broadcom appointment extends the Group's portfolio into enterprise automation, network operations and value stream management across 13 Asia Pacific markets*

**KUALA LUMPUR, 2 NOVEMBER 2026 – Infomina Berhad 盈获数码科技集 ("Infomina" or "the Group")** is broadening its enterprise software business beyond its established mainframe offerings, following its appointment by **VMware International Unlimited Company, a Broadcom company ("Broadcom")**, to distribute and support Broadcom's **Agile Operations Division ("AOD")** software portfolio across 13 Asia Pacific markets.

The appointment adds a new dimension to Infomina's existing Broadcom **Mainframe Software Division ("MSD")** business. While MSD solutions focus on the management and modernisation of mission-critical mainframe systems, AOD extends the portfolio into enterprise automation, network operations and value stream management.

These capabilities address different aspects of enterprise IT operations, from automating processes across technology environments and monitoring network performance to aligning technology planning and delivery with business priorities.

Together, the two portfolios give Infomina a broader range of enterprise software solutions to address technology requirements across mainframe, distributed and cloud environments. This extends the Group's role beyond the management of core systems to include the coordination and efficiency of wider IT operations.

Under the five-year appointment, commencing 1 November 2026, Infomina will distribute and support Broadcom's AOD software portfolio in Malaysia, Thailand, the Philippines, Singapore, Taiwan, Hong Kong, China, Indonesia, Australia, New Zealand, South Korea, Sri Lanka and India. Any extension beyond the original term will be subject to negotiation and mutual agreement between Infomina and Broadcom.

Commenting on the appointment, **Mr Yee Chee Meng 余志明, Chief Executive Officer of Infomina Berhad**, said:

*"Enterprise technology environments are becoming increasingly interconnected, with organisations having to manage core systems alongside distributed and cloud infrastructure. Our established experience in mainframe technology provides a strong foundation, and this appointment allows us to extend our enterprise software business into other areas of IT operations.*

*We see this as an opportunity to build on our existing capabilities and broaden the range of technology requirements we can address. It is also an important step in developing a more diversified enterprise software business as we continue to pursue opportunities across Asia Pacific."*

The appointment marks a further development in Infomina's relationship with Broadcom and broadens the Group's enterprise software portfolio across a wider range of technology environments.
