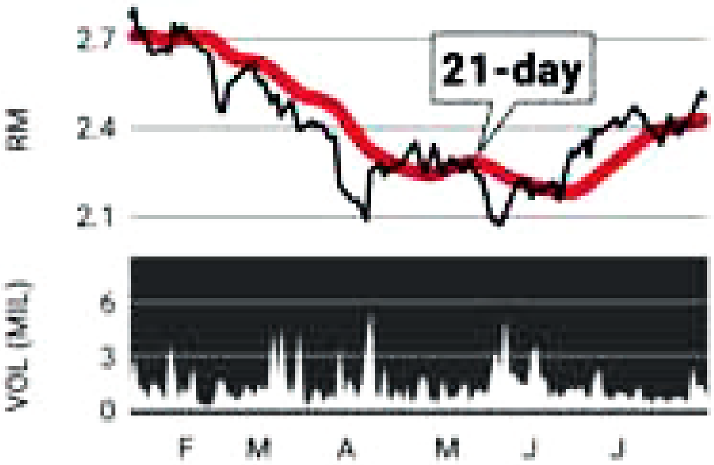
Kerjaya Prospek

JULY 29 **RM2.51**



KERJAYA Prospek Group Bhd crossed above the 200-day SMA line earlier this week, reflecting its positive recovery.

However, there are signs the share is taking a breather as the slow-stochastic descends from overbought conditions.

As a consolidation phase takes place, other indicators suggest the bullish momentum remains intact as the RSI stays firm at 63 points and MACD continues to push higher.

Upon continuation of a rally, the share could rally towards RM2.70 before arriving at its historic peak of RM2.87. Support is found at RM2.30 and RM2.09.
