B3. Commentary on prospects

For the Malaysian economy, the positive recovery is expected to gain momentum in 2023. This is underpinned by several factors including continued expansion in external demand, full upliftment of containment measures, reopening of international borders, and further improvement in labour market conditions. In addition, the implementation of investment projects and targeted policy measures will provide further support to economic activity and aggregate demand. Taken together, these factors pave the way towards a more broad-based and sustainable recovery for Malaysia.

Despite positive outlook for Malaysia in 2023, the oil and gas industry faces its own challenges. Heightened pressure by regulators, investors, financiers and societies have led to oil and gas companies pledging to lower their carbon footprint and setting net zero carbon emissions goals in line with the government efforts to Sustainability that balances Environment, Social and Governance ("ESG") considerations across its value chain.

Moving forward the Group will continue to strengthen our engagement with stakeholders in line with Sustainability initiatives and brings positive impact to ESG campaign. Utilising its capabilities and assets in non-oil and gas sectors such as renewable energy and power generation is to avoid over-reliance on the challenging oil and gas industries. This can be done through collaboration with local and international partners to strengthen bidding success rate and improve project delivery capability.

While undertaking the above initiatives, the Group which has a proven track record remained focus in exploring opportunities and completing tasks and projects for the oil and gas, renewable energy, water and other industries. Our experience as an oil and gas support service provider that has undertaken various projects over the years is a testament to the Group's technical capability to provide quality services.
